**Swiss chair makers: original quality
Swiss craftsmanship.**

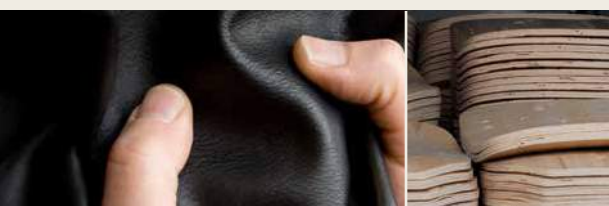

With us you're always sitting First class! Swiss-made quality and comfort.

As a Swiss manufacturer we are focused on defining a new seating concept: The TERGON office chair. We're committed to First Class quality, exceptional functionality, precision, refined technique and individual attention. You'll recognise our clear design, carefully chosen materials and masterful workmanship.

Whether you order by phone or by mail, online or with a local sales consultant: your TERGON Ergochair is always delivered straight from the factory to your office. Our skilled consultant custom-tailors the chair together with you, according to your personal needs and desires. A perfect fit.

Highest perfection, select materials and refined craftsmanship make the TERGON office chair a quintessential Swiss product - a masterpiece straight from the factory.

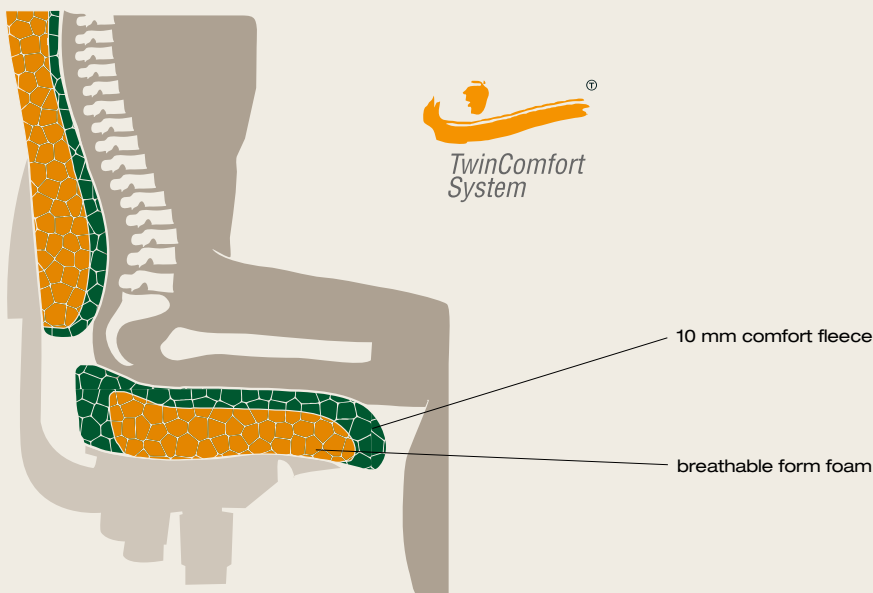

Relaxed and fit in the office: The TwinComfort System provides back relief all day long.

With the unique TwinComfort System in the chair's back and seating areas you get the back support that you need to stay dynamic and resilient. This will make you feel fit and relaxed, even after a long day at the office.

TwinComfort consist of two layers:

- A core of breathable comfort foam
- A 10mm temperature regulating comfort fleece

The form foam in the inner part of the seating area and the chair-back makes your TERGON Ergochair unmatched comfort. Its special workmanship allows it to maintain its original buoyancy. Similar to the texture of a mattress, multiple layers provide a unique level of seating comfort that you will only find with TERGON chairs. Even after years of use the seating area will be as comfortable as on day one.

Comfortable double foam
seating design (TwinComfort)

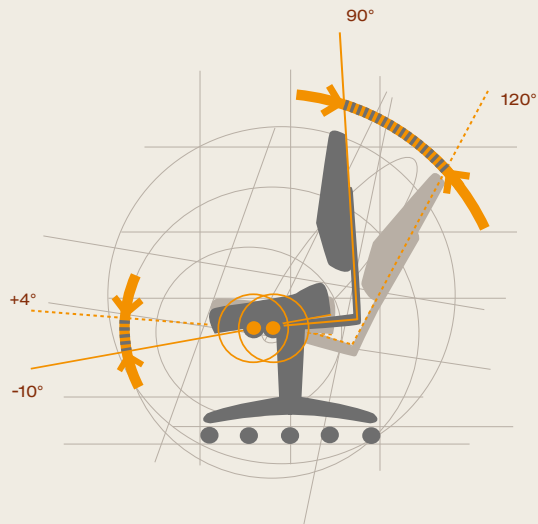

**Life is hard enough.
TERGON makes it more comfortable.**

Modelled on nature: The TwinComfort system is a „speciality“ of TERGON. It combines comfort with sophisticated ergonomics. The seat adjusts to every body shape providing pro-active support. You will feel fit and relaxed even at the end of a long day.

Ergoprotection: Active living - even while sitting.

Doctor Roland Nowak, occupational physician at Asklepios clinics Langen-Seligenstadt: „The biomechanical composition of this office chair is unanimously praised by our physiotherapists. Particularly the fully adjustable counterpressure of the backrest guarantees support of the lumbar lordosis. This ensures dynamic sitting with variable resistance for proper vertebrate support.“

Dynamics and movement in one seat: TERGON trains your back while you're working.

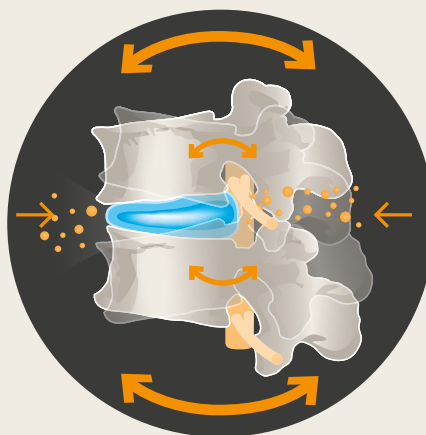

Maximal mobility due to flexible backrest.

We spend a lot of time sitting -- in front of the PC, in meetings, in the car, or in front of the television. Twelve hours a day on average. That's too much! Our backs need motion to stay healthy and fit! Renowned orthopedists and physiotherapists recommend an upright sitting posture that leaves enough space for movement.

TERGON office chairs address both: The upright posture and dynamic sitting. The shoulder muscles, neck and back are loosened, preventing painful tensions. The motion of the spine strengthens the muscles and keeps intervertebral discs flexible. The ergonomic TERGON office chair effectively prevents disc damage and enhances comfort and well-being at your work station.

Ergoprotection provides motion also when you're sitting. Prevents clothes from riding up since the center of rotation is shifted forward.

Motion stimulates natural fluids in the spinal disc and activates the nerve fibres.

Restored spinal disc filled with nutrients and fluids thanks to Ergoprotection.

T2-series

The TERGON Basic line: Original comfort

People who work a lot should sit comfortably. The T2-series does the job. Paper work, data entry in front of the PC or temporary work spaces: the T2 always looks appealing.

Anatomically well-formed cushions provide healthy posture. We recommend the T2 with our Ergoprotection motion-module. This mechanism allows you to adjust your sitting angle individually - if desired you can even choose the sitting angle of special spinal support pads. Of course, T2 is either available with "Synchronic Mechanic" or with "Bodymove". T2 is the practical and ergonomic solution for the diverse needs of contemporary offices. Do something for the backbone of your company. Don't wait another day.

The T2 adjusts to your workstation's individual sitting requirements, with height adjustable seating surfaces and back-rests, including optimal lumbar and shoulder blade support.

T2.0 Overview

T6.0 LL

Model T6.0 with large seating surface and high backrest. Ergoprotection motion module with continuously adjustable back- and seating inclination. Backrest counterpressure control from 45 to 135 kg. Seat depth adjustment in 6 positions. Armrests Flamenco Alu.

T6.0 XL

Model T6.0 with large seating surface and extra high backrest. Ergoprotection motion module with continuously adjustable back- and seating inclination. Backrest counterpressure control from 45 to 135 kg. Height and depth adjustable Bolero Alu armrests. *Mit Kopfstütze.*

Management line

Leather, when leather is due

Have a sit on a TERGON leather Ergochair and you will immediately feel the subtle distinction. Noble, fine grain leather, carefully selected, masterfully processed and by hand sewn: exactly that touch of luxury that makes life so pleasant - and that you deserve. Ergochair and leather is the perfect marriage between comfort and perfection, between elegance and ergonomics. Let the fascination of this exceptional sitting experience take you over. Lean back - you might even forget that you're actually sitting on an office chair...

T1-series

The TERGON Lab line

Be it during a technical analysis, at an electronic High-Tech workplace, at the check-out in a mall or in the operating room: everyone is entitled to a healthy back, particularly those under difficult working conditions! TERGON sets new standards in terms of ergonomics at technical workplaces. Our anatomic form foam and the medically correct lumbar support in the backrest relieve the spine and relax the back muscles. The individually adjustable seating inclination and the proactive backrest counterpressure secure an active and upright posture. Furthermore TERGON offers the precisely engineered pneumatic pressure, wheels that immediately block and stop securely when too little weight is put on them, or an optional adjustable footrest. All of this is provided with individual on-site attention.

Features

The right solution whatever the need

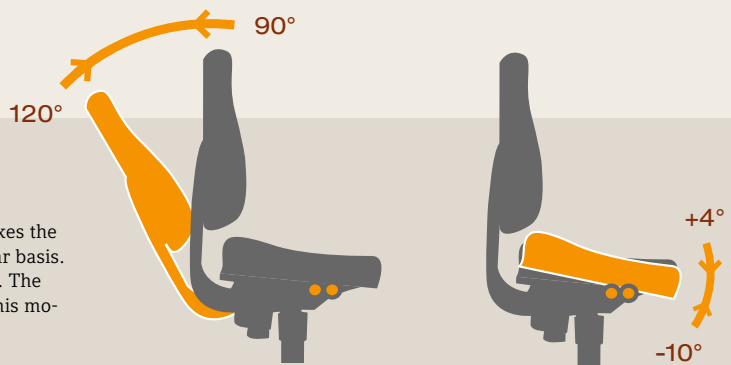

STANDARD

ADJUSTABLE BACK HEIGHT

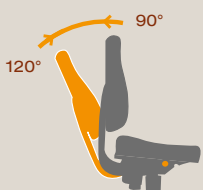

MOTION MODULE

Typically TERGON: With the **Ergoprotection** motion module you reach an **open sitting angle** that releases pressure on digestive and respiratory organs and relaxes the tension along the spine. Switch between upright and reclined position on a regular basis. The backrest counterpressure (45 to 135 kg) can be adjusted to your body weight. The intervertebral discs remain supple by those „free-floating“ changes of position. This motion module is very suitable for people who work with computers.

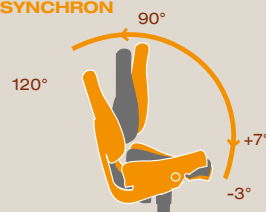

BODYMOVE

- Backrest is constantly adjustable and lockable in every position. Back angle 90° to 120°.
- Backrest counterpressure control from 45 to 135 kg.
- Clever idea: due to offset center of rotation when leaning backwards no friction between back and backrest.
- For short activities in a sitting position.

SYNCHRON

- Coupled (synchronic) adjustment of back- and seating inclination (back from 90° to 120°, seating from -3° to +7°).
- Automatic adjustment of the right seating- and back inclination at change of position.
- Adjustable back counterpressure (45 to 135 kg)
- For „dynamic sitting“.
